SUMMARY

Full-stack Lead Engineer with 5+ years' experience architecting and scaling distributed systems. Proficient in JavaScript/TypeScript, Node.js, React, and REST/WebSocket APIs. Seeking to lead development of real-time, spatial computing applications.

EXPERIENCE

Previous Company Name

Previous Location

Senior Full-Stack Engineer

YYYY-YYYY

- Led development of a real-time collaboration platform using Node.js, React, and WebSockets, resulting in a 20% increase in user engagement.
- Designed and implemented REST APIs for a high-traffic application, improving response times by 15%.
- Architected and deployed a microservices-based system using Docker and Kubernetes, enhancing scalability and reducing downtime by 10%.

PROJECTS

Real-time Spatial Logic Engine (Bubblzz-inspired)

YYYY-YYYY

- Developed a real-time spatial logic engine using Node.js and a NoSQL database (e.g., MongoDB) to manage and coordinate objects, users, and behaviors in a simulated 3D environment.
- Implemented WebSocket communication for real-time updates and interaction, achieving sub-second latency.
- Designed and implemented a system for managing user permissions and dynamic interactions within the spatial environment, supporting 1000+ concurrent users.

Interactive Environment Creation Platform (AirScene-inspired)

YYYY-YYYY

- Built a platform for designing, scripting, and deploying interactive environments using React and a graph database (e.g., Neo4j) to model relationships between objects and events.
- Developed an event-driven architecture using Kafka to handle real-time updates and trigger actions within the environment.
- Integrated with a 3D modeling library (e.g., Three.js) to create visually rich and engaging experiences.

Mobile/Web Interface for Spatial Experiences (LightPlay-inspired)

YYYY-YYYY

- Created a mobile and web interface using React Native and React to allow users to interact with the spatial environments in real-time.
- Implemented real-time collaboration features, allowing multiple users to interact simultaneously within the same environment.
- Integrated user authentication and authorization mechanisms using OAuth 2.0, ensuring secure and controlled access to the platform.
